

EU Type Examination Certificate CML 18ATEX5194X Issue 0

1 Equipment intended for use in Potentially Explosive Atmospheres Directive 2014/34/EU

2 Equipment NIVUS R-8 & NIVUS R-16

Manufacturer NIVUS GmbHAddress Im Tale 2,

Address Im Tale 2,

D-75031 Eppingen,

Germany

- 5 The equipment is specified in the description of this certificate and the documents to which it refers.
- Certification Management Limited, Unit 1 Newport Business Park, New Port Road, Ellesmere Port CH65 4LZ, UK, Notified Body Number 2503, in accordance with Article 17 of Directive 2014/34/EU of the European Parliament and of the Council, dated 26 February 2014, certifies that this equipment has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment intended for use in potentially explosive atmospheres given in Annex II to the Directive.

The examination and test results are recorded in the confidential reports listed in Section 12.

- 7 If an 'X' suffix appears after the certificate number, it indicates that the equipment is subject to conditions of safe use (affecting correct installation or safe use). These are specified in Section 14.
- This EU Type Examination certificate relates only to the design and construction of the specified equipment or component. Further requirements of Directive 2014/34/EU Article 13 apply to the manufacture of the equipment or component and are separately certified.
- 9 Compliance with the Essential Health and Safety Requirements, with the exception of those listed in the confidential report, has been demonstrated through compliance with the following documents:

EN 60079-0:2012:A11:2013

EN 60079-18:2015

10 The equipment shall be marked with the following:

 $\langle \mathcal{E}_{\mathbf{x}} \rangle_{\mathsf{II}\; \mathsf{2}\; \mathsf{G}}$

 $\langle \mathcal{E}_{\mathbf{x}} \rangle_{||2|}$

Ex mb IIC T4 Gb

Ex mb IIIC T135°C Db

Ta= -20°C to +80°C

Ta= -20°C to +80°C

11 Description

The NIVUS R-8 & NIVUS R-16 are DC powered level measurement sensor utilising radar technology. The sensor models are identical; differing in power outputs only The sensor is housed in a non-metallic enclosure with integral five core cable which connects to control equipment located in the safe area providing power and data communication. The enclosure incorporates a threaded cap which allows the equipment to be mounted on a suitable bracket or flange.

The equipment is powered from a nominal 24Vdc power supply located in the safe area. The output of the sensor is sent via a signalling wire to external control equipment.

The equipment is fully encapsulated to allow use in areas requiring equipment protection levels Gb and Db and has the following ratings:

Um = 28Vdc (supply input)

Um = 6Vdc (signal connection)

12 Certificate history and evaluation reports

Issue	Date	Associated report	Notes
0	06/07/2018	R11818B/00	Issue of prime certificate

Note: Drawings that describe the equipment or component are listed in the Annex.

13 Conditions of manufacture

The following conditions are required of the manufacturing process for compliance with the certification.

- Where the product incorporates certified parts or safety critical components the manufacturer shall ensure that any changes to those parts or components do not affect the compliance of the certified product that is the subject of this certificate.
- 13.2 Each piece of equipment shall be visually inspected. No damage shall be evident, such as cracks in the compound, exposure of encapsulated parts, flaking, inadmissible shrinkage, swelling, decomposition, failure of adhesion, or softening.

14 Special Conditions for Safe Use (Conditions of Certification)

The following conditions relate to safe installation and/or use of the equipment.

- 14.1 Under certain extreme circumstances, the non-metallic parts incorporated in the enclosure of this equipment may generate an ignition-capable level of electrostatic charge. Therefore the equipment shall not be installed in a location where the external conditions are conducive to the build-up of electrostatic charge on such surfaces (e.g. steam generation or windblown dust). In addition, the equipment shall only be cleaned with a damp cloth.
- 14.2 The equipment must be routinely inspected to avoid the build-up of dust layers when installed in Zones 21 or 22.
- 14.3 The equipment should not be used if there are any cracks or damage to the enclosure.

- 14.4 The power supply and signal connections to the equipment shall each incorporate a 100mA fuse located in the safe area. The fuses shall have a minimum breaking capacity of 1500A.
- 14.5 The equipment shall only be installed in areas where there is a low risk of mechanical danger.

Certificate Annex

Equipment NIVUS R-8 & NIVUS R-16

Manufacturer NIVUS GmbH

The following documents describe the equipment or component defined in this certificate:

Certificate and File Transfer

This document confirms the transfer of the following referenced certificates and files.

Receiving Notified Body:

CML B.V., Koopvaardijweg 32, 4906CV Oosterhout, The Netherlands (Notified Body number 2776)

(Original) Issuing Notified Body:

Certification Management Limited (Eurofins E&E CML Limited)
Newport Business Park,
New Port Road,
Ellesmere Port
CH65 4LZ
United Kingdom
(Notified Body number 2503)

Manufacturer:

NIVUS GmbH Im Täle 2, 75031 Eppingen, Germany

Certificates transferred

CML 18ATEX2193X CML 18ATEX5194X

The manufacturer may use this document as evidence of continuity of certification.

Where the certification documentation or markings require updating to reflect the transfer, for example, change to Notified Body number, this is permitted without submission of updated documentation to CML.

The manufacturer shall apply to CML for any other changes to the product design.
